

BC PLANNER.com

Web-based Business Continuity Planning Solution

BCplanner.com is a web-based planning system designed to guide users through the process of developing and maintaining Business Continuity Plans (BCP). This integrated system walks users through each step of the BCP planning process and helps develop a solid planning strategy that outlines a business organization's approach to counter and recover from events/disruptions that can interfere with normal business operations. The BCplanner.com system provides an unparalleled planning solution to users, making the BCP development process easy to understand and highly efficient to maintain. We've created a superior solution to managing and enhancing your business continuity program and through our technology we've become the solution of choice for more than 2,000 Business Continuity/Continuity of Operations customers worldwide.

BCplanner.com Features:

- Easy-to-use, guides users through the process of developing BCP plans, and requires no experience prior to use
- Scalable for use by business organizations of all types and sizes, system standardizes and streamlines the planning process of complex organizations, manages the data collection process and keeps all planners working in a common planning environment
- Built in Helper Tips (?) literally "walk" users through the various sections of developing their plan and explains the strategies/views to consider for each section
- Creates a hard-copy Microsoft Word document that can be printed, as well as a "Living Plan" that can be updated or modified online at anytime.
- Password protected, secured with 128-bit encryption, plan information can be accessed at anytime 24/7 from any computer having an internet connection.
- Built-in Review and Grading tools; Project Managers can now provide real-time, online feedback to planners for future plan revisions and enhancements.

BCplanner.com – Business Continuity Planning System

BCplanner.com is an easy-to-use planning tool that walks users through each step of developing Business Continuity Plans (BCP). The BCplanner.com system assists planners in developing an organization's overall BCP strategy, which includes the roles and responsibilities an organization should take in order to efficiently relocate and continue essential business functions during times of disruption or disaster events. The system is designed to accommodate planners of all backgrounds and helps ensure that their BCP identifies and addresses the major sections of business continuity to consider. The major sections provided within the BCplanner.com system include:

- Business Impact Analysis
- Risk Assessment
- Essential Business Functions
- Primary and Alternate Facilities
- Vital Records and Resources
- BCP Teams and Responsibilities
- Lines of Succession
- Delegations of Authority
- Communications
- Test, Training, and Exercises
- Plan Maintenance
- and more!

Through the use of Helper Tips and other built-in planning tools, the system is able to intuitively lead users through each step in developing their organization's Business Continuity Plan. The system provides a guided pathway which ensures that all facets of business continuity within the organization's plan are highlighted, addressed, and compliant.

Using BCplanner.com, business organizations can be assured that their plan is not only built upon strong BCP planning standards and real-world best practices, but the system also maximizes their ability to maintain and enhance their plan efficiently over time.

"...within just a few hours of using the system, I understood what types of information went into my plan and why. BCplanner.com made the process easy, and I'm really glad I didn't have to start with just a blank sheet of paper"

"...our management selected BCplanner.com to help manage the BCP planning process for our 12 separate divisions...each division needed a different plan overall with different content and strategies suited to their operations...the reporting functionality within the system was the keys to our success; making each of our plans consistent in the output. Had we chosen to do this process by hand, it would have been completely unmanageable and our plans would not have been consistent"
